

Meet Shirley

A mother determined to get her stride back.

I had chronic pain in my legs for nine months. My pain was a 10 before the implant and after I got StimRouter my pain was gone. I have no pain now.

When I first learned about StimRouter I was getting injections that lasted about four days and the pain would come back. My doctor told me about StimRouter and I was ready to try it because the pain in my legs was so bad.

I was a little scared before the procedure but everyone was so nice and the implant procedure was fine. They showed me how to use it and we talked about how the system works and it was easy to operate the system after that. It really is easy and it's been wonderful for me.

I turn the Stimrouter on for three hours at a time, twice per day, and the pain relief lasts the entire day. When I take it off the pain relief still lasts. It's working well for me.

"It's working so wonderfully on my right leg— I'm going to ask the doctor for another one on my left leg."

Before the Stimrouter, my leg was so bad and it was difficult to walk but after the Stimrouter I walked about two miles with my daughter and she said, "Mama, I'm so glad this works for you and now I'm going to need to work hard to keep up with you."

I would recommend StimRouter to anybody that has the chronic pain problems that I've had with my legs. I'm fine now and it's been really good for me.

The Implantable Peripheral Nerve Stimulator Indicated to Treat Pain of Peripheral Nerve Origin

- A one-time, 20 minute, minimally invasive lead implant procedure
- No implanted pulse generator
- Targets pain at its precise origin
- Conditional MRI Safety

This is a patient testimonial and individual results may vary.

Before using the StimRouter System, be certain to read the entire StimRouter Procedure Manual and Clinician Manual. Be certain to understand the following safety information:

Indications for Use: The StimRouter Neuromodulation System is indicated for pain management in adults who have severe intractable chronic pain of peripheral nerve origin, as an adjunct to other modes of therapy (e.g., medications). The StimRouter is not intended to treat pain in the craniofacial region.

Contraindications: The StimRouter Neuromodulation System is contraindicated for patients who have any active implanted device such as an implanted demand cardiac pacemaker or defibrillator, or any metallic implant in the immediate area intended for implant. Maintain a minimum safe separation distance of 15 cm (6 in.) between the StimRouter Electrode with External Pulse Transmitter and all other active implanted devices and metallic implants.

Warnings: Magnetic resonance imaging (MRI), potential adverse events, induced currents, pregnancy, long-term effectiveness of neurostimulation, programming, device components, flammable fuel or chemicals, driving and operating machinery and electromagnetic compatibility.

Precautions: Physician training, post-operative care, implant location, for single patient use only, postural changes, keep out of reach of children, skin abnormalities, skin irritation, known or suspected heart problems, electrode placement and stimulation, expiration date, implant failure, storage and handling.

Adverse Effects: Risks related to the implant procedure, risks related to stimulation, additional risks related to the system.
