

STIMROUTER PATIENT SURVEY RESULTS

As the market leader in Peripheral Nerve Stimulation, Bioness is the only company to survey our own implanted patients to learn about the performance of our chronic pain solution. Through better understanding how patients use the **StimRouter** each day, we can learn from them how to improve our products and support materials. As part of our continuous improvement effort, the **StimRouter** Team surveyed nearly 500 patients about their experience with **StimRouter**. 133 patients responded representing 17 different nerves. Here is what they had to say about how the **StimRouter** helps them manage their chronic pain:

- ✿ 88% of patients surveyed report actively using their StimRouter to treat their chronic pain
- ✿ 79% of patients who have had their StimRouter for one year or longer still actively use their device
- ✿ 76% of patients surveyed reported that they are satisfied with their device, and almost 40% reported that they are extremely satisfied
- ✿ A majority of patients surveyed reported that their activity level increased by at least 50% after receiving their StimRouter

StimRouter patients continue using their device because it helps them significantly reduce their pain, become more active, and get back parts of their lives that they feared they had lost. In their own words:

- ✿ *"Awesome product that provides a non-narcotic solution"*
- ✿ *"I wish I had gotten it sooner"*
- ✿ *"The StimRouter has significantly reduced pain in my paralyzed arm and helped return some function"*
- ✿ *"I love my StimRouter device!"*
- ✿ *"Because of the StimRouter, I got my life back!"*
